

# Lean Systems Workshop

*Real Improvements Start Here*

In this **8-hour** workshop, you will learn what is meant by waste (*Muda*) with examples from different industries. You will also learn how to prepare a value stream map (current state & future state) using a case study. You will then apply your understanding with hands-on exercises (*batch-and-queue vs. continuous flow*).

## Outline

- > What is a Lean System?
- > Identifying value-added work
- > Objectives of a Lean System
- > Forms of Waste
  - Overproduction*
  - Waiting*
  - Transport*
  - Unnecessary Processing*
  - Inventory*
  - Extra Motion*
  - Correction (of defects/errors)*
- > Waste and quality costs
- > Value Stream Mapping
  - Current State*
  - Future State*
- > Implementation Issues
- > Hands-on lean simulation exercise\*

## Who Should Attend?

Managers and professionals at all levels who are interested in understanding modes of waste and achieving lean systems

\*A four-hour version of this workshop is available without the lean simulation exercise
